Sindile Leopard Protection Projects

Leopards are considered the most resilient of all large feline species. Unfortunately, for African leopards, natural habitats and food sources are under threat due to increased land development and agricultural stock farmer conflict.

Saving Leopards:

- Leopards found in problematic environments need to be carefully captured and moved to a safe habitat as quickly as possible. They then need to habituate to their new surroundings and their new home straight after release, to stop them from escaping and returning to the previous, unsafe habitat.

What is Needed:

- Non-lethal trapping devices to ensure the safe capture and comfort of the leopard.
- Pre-release enclosures especially designed with electric fencing and large enough for natural movement.

R700,000

**CONTRIBUTION
GOAL**
(As of May 2025)

R600,000 = 1 PRE-RELEASE ENCLOSURE
R60,000 = 3 NON-LETHAL TRAPPING DEVICES
R40,000 = FEEDING LEOPARDS DURING HABITUATION
